## **Preface**

This quarterly publication provides archival reports on developments in programs managed by JPL's Office of Telecommunications and Data Acquisition (TDA). In space communications, radio navigation, radio science, and ground-based radio astronomy, it reports on activities of the Deep Space Network (DSN) and its associated Ground Communications Facility (GCF) in planning, in supporting research and technology, in implementation, and in operations. Also included is TDA-funded activity at JPL on data and information systems and reimbursable DSN work performed for other space agencies through NASA. The preceding work is all performed for NASA's Office of Space Tracking and Data Systems (OSTDS).

In geodynamics, the publication reports on the application of radio interferometry at microwave frequencies for geodynamic measurements. In the search for extraterrestrial intelligence (SETI), it reports on implementation and operations for searching the microwave spectrum. The latter two programs are performed for NASA's Office of Space Science and Applications (OSSA).

Finally, tasks funded under the JPL Director's Discretionary Fund and the Caltech President's Fund which involve the TDA Office are included.

This and each succeeding issue of the TDA Progress Report will present material in some, but not necessarily all, of the following categories:

## **OSTDS Tasks**

DSN Advanced Systems

Tracking and Ground-Based Navigation

Communications, Spacecraft-Ground

Station Control and System Technology

Network Data Processing and Productivity

DSN Systems Implementation

Capabilities for New Projects

Networks Consolidation Project

New Initiatives

Network Sustaining

**DSN** Operations

Network Operations and Operations Support

Mission Interface and Support

TDA Program Management and Analysis

GCF Operations and Implementation

Data and Information Systems

## OSSA Tasks

Search for Extraterrestrial Intelligence
Geodynamics
Geodetic Instrument Development
Geodynamic Science

Discretionary Funded Tasks
